@radu_coravu

Technical Communication

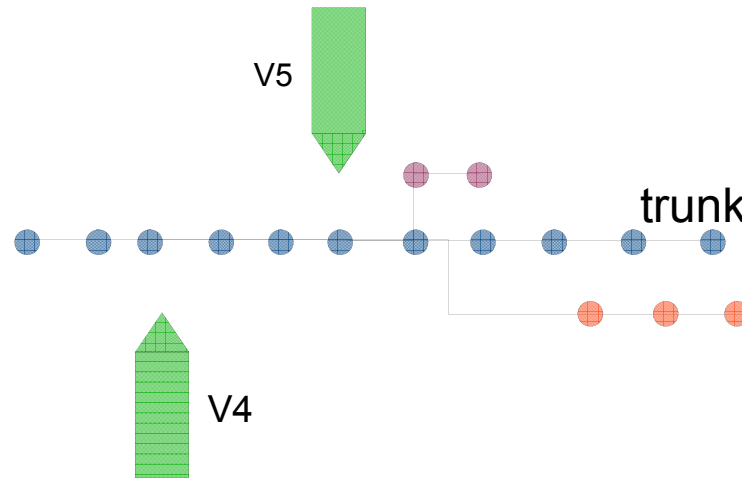

- Records knowledge about using tools and processes.
- Spread knowledge to reach large audiences.

Reuse

Version Control

- Version control allows you to reuse content tagged at a certain point in time in order to produce older versions of your publications.

Great Reuse = Publishing XML content to different formats

- XML contains the necessary content.
- XML contains the necessary structure.
- XML is a standard.
- Choice between open source and commercial tools.

Publishing DITA content to different formats

- Topic oriented.
- Extensible.
- Choice between free and commercial editing and publishing tools.
- Plethora of reuse possibilities described below.

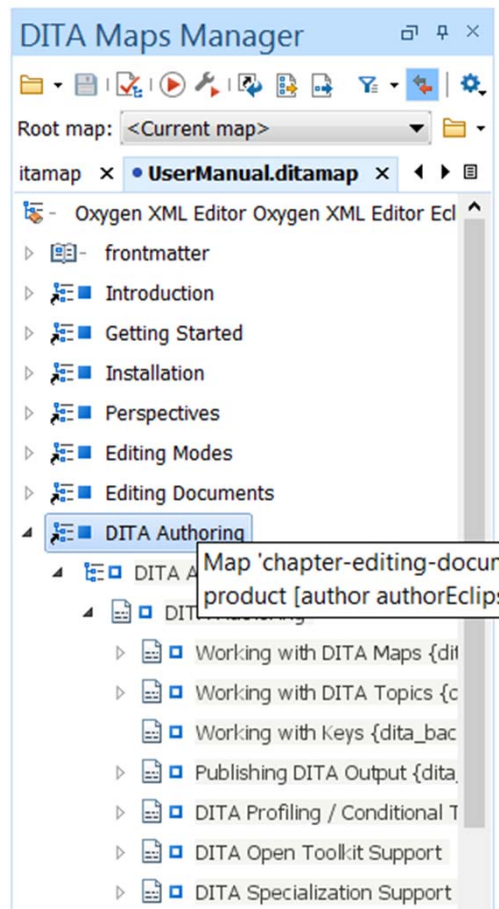

Create larger publications from existing ones

- Merge multiple existing DITA Maps in various new publications.
- Use new DITA 1.3 key scopes to separate key contexts.

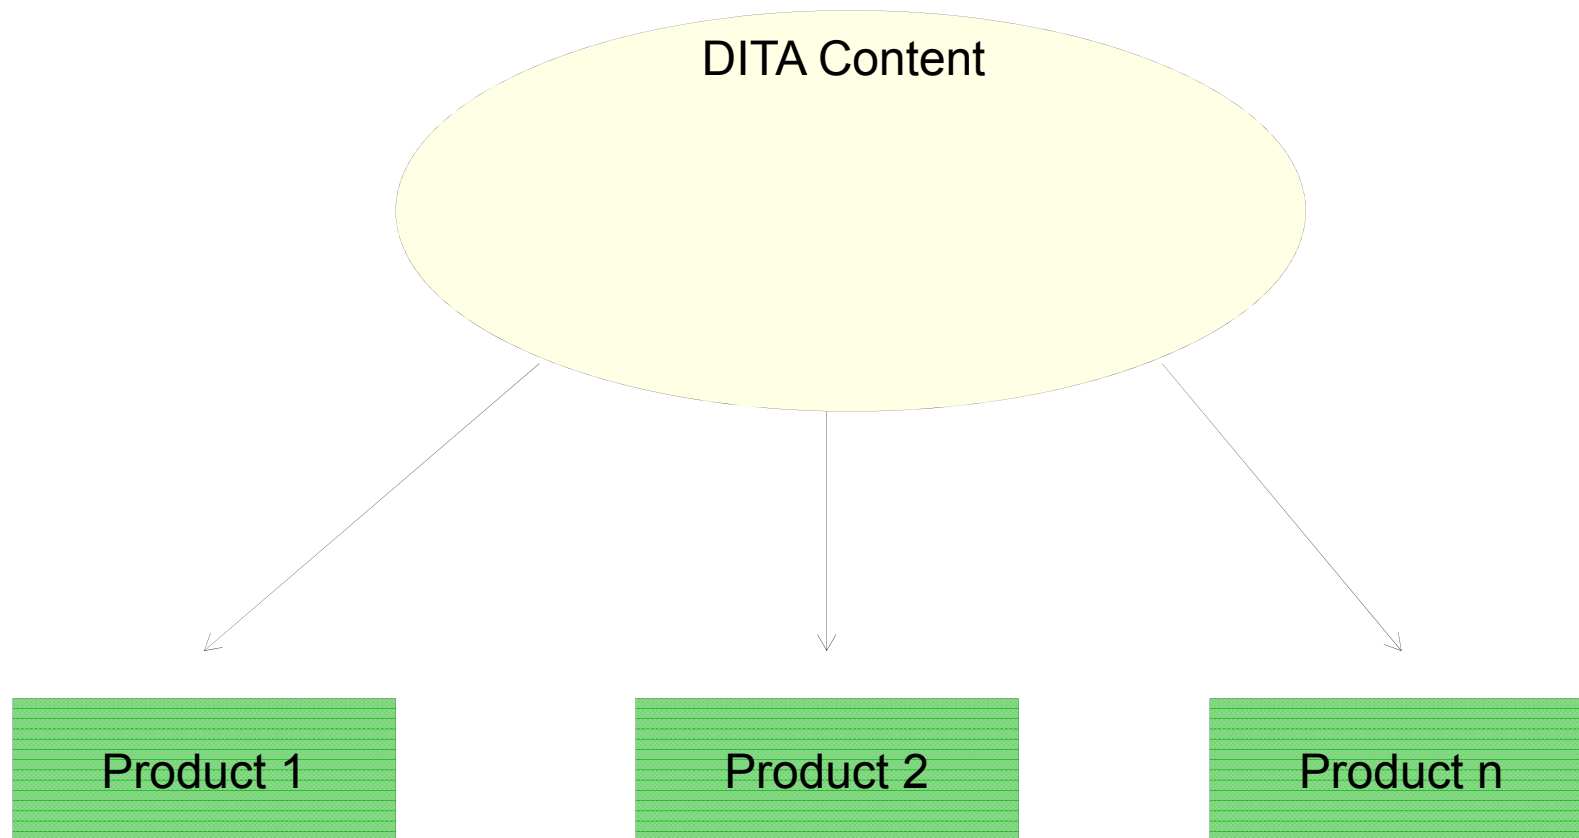

Even if you have a single root map you can keep related sections in different DITA Maps.

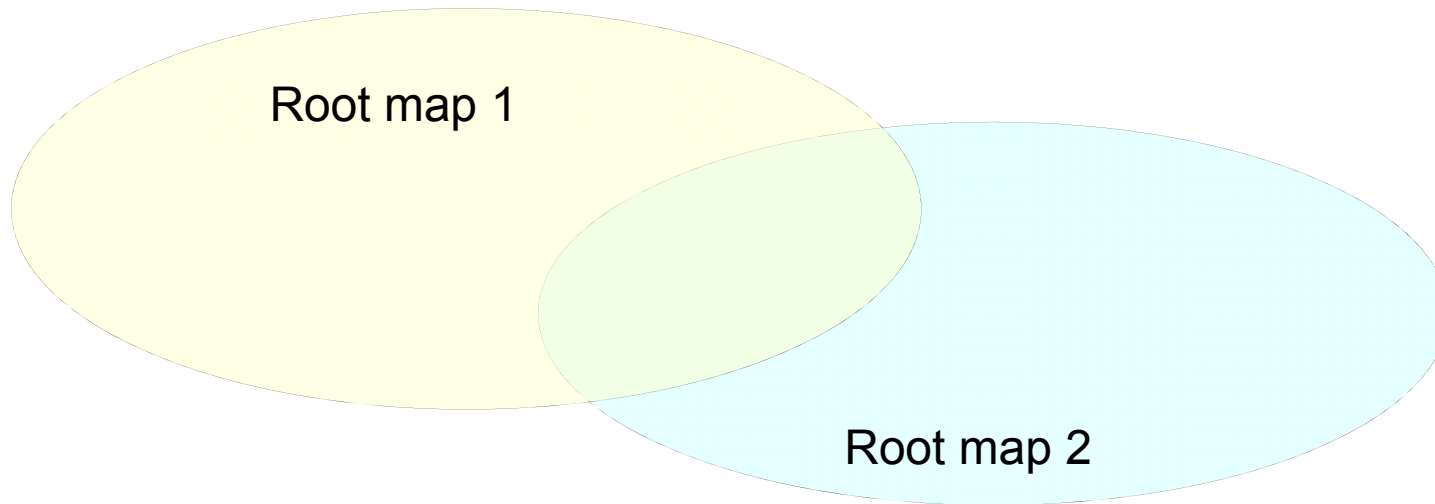

`<chapter href="chapter-author-dita.ditamap" collection-type="...`

Reuse content for similar products

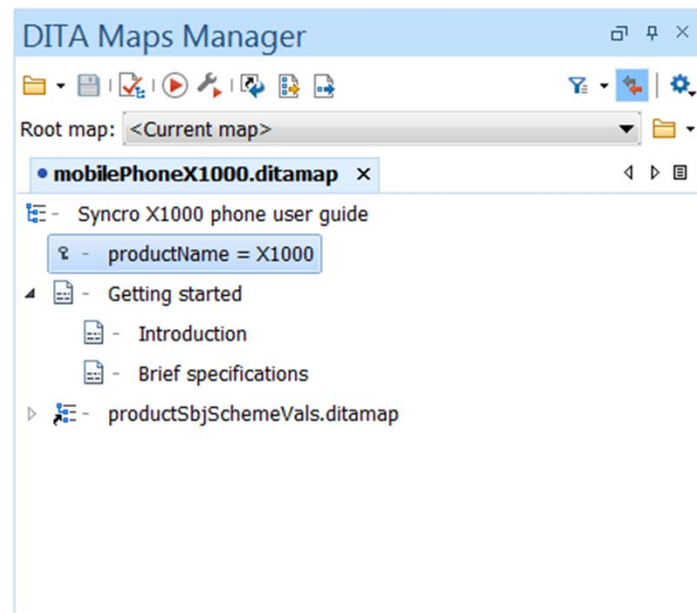

1. Use multiple root maps.

- Reuse entire topics.
- Define variable product names.
- Remap links and reused content using keys.

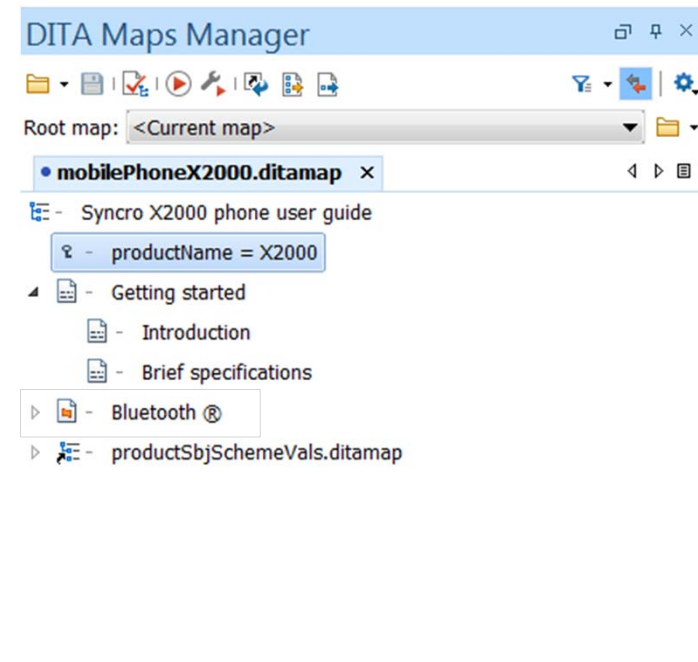

Example

DITA Maps Manager

Root map: <Current map>

- mobilePhoneX1000.ditamap
 - Syncro X1000 phone user guide
 - productName = X1000
 - Getting started
 - Introduction
 - Brief specifications
 - productSbjSchemeVals.ditamap

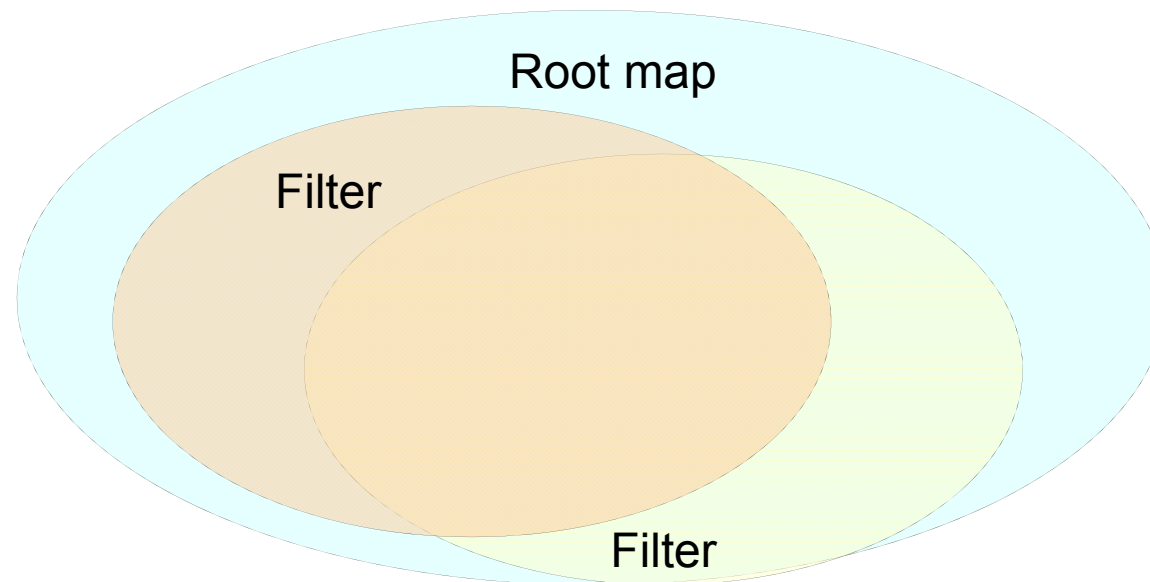

DITA Maps Manager

Root map: <Current map>

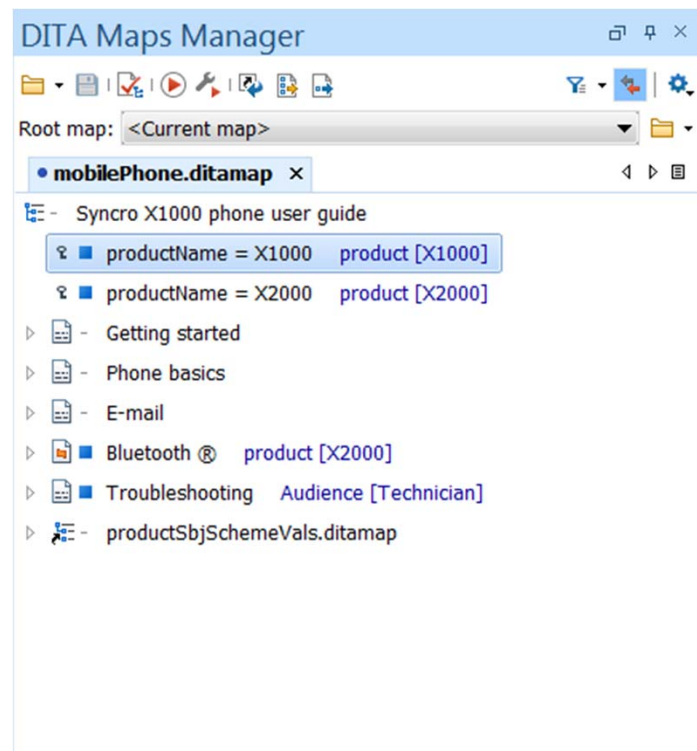

- mobilePhoneX2000.ditamap
 - Syncro X2000 phone user guide
 - productName = X2000
 - Getting started
 - Introduction
 - Brief specifications
 - Bluetooth ®
 - productSbjSchemeVals.ditamap

2. Use single root map.

- Define variable product names.
- Use profiling attributes to filter content at topic or element level.

Example

Profiling At Topic Level

- ▼  **Topic Group** product [editor]
 - ▶   Global Preferences product [editor]
 -  Add-ons Preferences product [editor]
 -  Fonts Preferences product [editor]
 - ▶   Document Type Association Preferences product [editor]
 -  Perspectives Layout Preferences product [editor]
 -  Encoding Preferences product [editor]
 - ▶   Editor Preferences product [editor]
 -  CSS Validator Preferences product [editor]
 - ▶   XML Preferences product [editor]
 - ▶   Data Source Preferences product [editor]
 - ▶   SVN Preferences product [editor]
 - ▶   Diff Preferences product [editor]
 -  Archive Preferences product [editor]
 -  Plugins Preferences product [editor]
 - ▶   External Tools Preferences product [editor]
 - ▶   Menu Shortcut Keys Preferences product [editor]
 - ▶   File Types Preferences product [editor]
 -  The Open/Find Resources Preferences Page product [editor]
 -  Custom Editor Variables Preferences product [editor]
 - ▶   Network Connection Settings Preferences product [editor]
 -  XML Structure Outline Preferences product [editor]
 -  View Views Preferences product [editor]
 -  Messages Preferences product [editor]
- ▼  **Topic Group** product [author]
 - ▶   Global Preferences product [author]
 -  Add-ons Preferences product [author]
 -  Fonts Preferences product [author]
 - ▶   Document Type Association Preferences product [author]
 -  Perspectives Layout Preferences product [author]

Alternate Text

▼ Choosing an installer

You have a choice of installers.

- The native installer for your platform. On Windows and Linux, the native installer can run also in unattended mode.

```
product [ author, developer, editor, svnClient ]
```

- The All-platforms installer, which can be used on any supported platform.

```
product [ author, developer, editor, svnClient ]
```

- The Update Site installation.

```
product [ authorEclipse, developerEclipse, editorEclipse ]
```

- The Zip archive installation.

```
product [ authorEclipse, developerEclipse, editorEclipse ]
```

Reuse fragments of content

Topic

- Content references
- Content key references
- Content reference ranges
- Content push
- Key references

Content key references

Reusable component

```
<dd id="CPU">
  <ul id="ul_lym_bqd_x4">
    <li>Minimum - <tm tmttype="tm">Intel Pentium III</tm>/<tm tmttype="tm">AMD Athlon</tm>
      class processor, 1 <term>GHz</term>.</li>
    <li>Recommended - Dual Core class processor.</li>
  </ul>
</dd>
```

```
<keydef keys="reusable.install" href="reusables/reusable.installation.dita"/>
```

Conkeyref

```
<dd conkeyref="reusable.install/CPU"/>
```

Preview

CPU

- Minimum - Intel Pentium III™/AMD Athlon™ class processor, 1 GHz.
- Recommended - Dual Core class processor.

Content reference ranges

```
<steps>
  <step id="washing">
    <cmd>Wash the vegetables thoroughly.</cmd>
  </step>
  .....
  <step id="peeling">
    <cmd>Pass the peeler gently over the vegetable.</cmd>
  </step>
</steps>
```

Reusable components

```
<keydef keys="reusable_steps" href="reusable_steps.dita"/>
```

```
<steps>
  <step conkeyref="reusable_steps/washing" conrefend="default.dita#default/peeling">
    <cmd/>
  </step>
</steps>
```

Conkeyref range

1. Wash the vegetables thoroughly.
2. Put on some thick mittens.
3. Pass the peeler gently over the vegetable.

Preview

Content push

```
<steps>
```

Original steps

```
.....
```

```
<step id="peeler_handling">
```

```
<cmd>Pass the peeler gently over the vegetable.</cmd>
```

```
</step>
```

```
</steps>
```

```
<keydef href="stepsPusher.dita"/>
```

```
<steps>
```

Conkeyref push

```
<step conaction="mark" conkeyref="peeling/peeler_handling">
```

```
<cmd/>
```

```
</step>
```

```
<step conaction="pushafter">
```

```
<cmd>Read the instructions.</cmd>
```

```
</step>
```

```
</steps>
```

1. Wash the vegetables thoroughly.
2. Put on some thick mittens.
3. Pass the peeler gently over the vegetable.
4. Read the instructions.

Preview

Key references (Variables)

Reuse simple variables like product name, executable, etc.

```
<!-- product name -->  
<keydef keys="product" product="editor">  
  <topicmeta>  
    <keywords>  
      <keyword>Oxygen XML Editor</keyword>  
    </keywords>  
  </topicmeta>  
</keydef>
```

```
<title>Installation Options for <ph keyref="product"/></title>
```

Installation Options for Oxygen XML Editor

Tips

- Keep all your reused content in special topics located in special folders.
- Keep a table with small reused elements.
- When using conkeyrefs create a special map with key definitions.
- Use conkeyrefs instead of conrefs.

DITA 1.3 contributions to Reuse.

- Reuse topic with variable content depending on context (keyscopes).
- Reuse the same content profiled in various ways in the same publication (branch filtering).

Reuse with Key Scopes

```
<title><ph keyref="model"/> Phone Overview</title>
```

Product key reference

Various key values in various scopes

```
.....  
<topicref href="phoneOverview.dita" keyscope="X1000Scope">  
  <keydef keys="model">  
    <topicmeta><keywords><keyword>X1000</keyword></keywords></topicmeta>  
  </keydef>
```

```
.....  
<topicref href="phoneOverview.dita" keyscope="X2000Scope">  
  <keydef keys="model">  
    <topicmeta><keywords><keyword>X2000</keyword></keywords></topicmeta>  
  </keydef>
```

-  X1000 Phone Overview
 -  Brief Specifications
 -  Available Colors and Accessories
-  X2000 Phone Overview
 -  Brief Specifications
 -  Available Colors and Accessories

Preview

Reuse with Branch Filtering

Merge two product documentation maps

```
.....  
<topicref href="phoneDetails.ditamap" format="ditamap">  
  <ditavalref href="ditaval/X1000Branch.ditaval">  
    <ditavalmeta><dvrResourceSuffix>1</dvrResourceSuffix></ditavalmeta>  
  </ditavalref>  
</topicref>
```

```
.....  
<topicref href="phoneDetails.ditamap" format="ditamap">  
  <ditavalref href="ditaval/X2000Branch.ditaval">  
    <ditavalmeta><dvrResourceSuffix>1</dvrResourceSuffix></ditavalmeta>  
  </ditavalref>  
</topicref>
```

```
.....
```

-  X1000 Phone Overview
 -  Brief Specifications
 -  Available Colors and Accessories
-  X2000 Phone Overview
 -  Brief Specifications
 -  Available Colors and Accessories

Preview

Reuse non-DITA resources in multiple publications.

- Reuse images (href or keyref).
- Reuse videos.
- Reuse other linked resources (PDFs).

- Choose your image format wisely (suggestion: PNG).
- Try to scale images before referring to them.

Conclusions

- DITA is excellent for reuse, collaboration and review.
- DITA is not necessarily expensive, you can start slow and grow as you need
- DITA is mature, there is a very active community around DITA providing help, tools and services

Thank You!
