for professional technical documentation.**

TIM Standard Editions for Technichal Documentation

Standardized, individual or tailor-made ...

TIM ONE

The professional content management system for technical documentation in small and medium-sized companies as well as for documentation service providers.

TIM TEAM

The professional content management system for working groups in medium-sized and large companies with workflows and individual configuration.

TIM ENTERPRISE

The individual & tailor-made content management system optimized for the company specific requests of major enterprises and corporations for comprehensive technical documentation and product communication.

With the TIM Standard Editions, we offer a tailor-made funcitonality: you will receive a professional solution from a single source completed by a flexible licensing model (on-site or SaaS) .

Solutions for sophisticated customer requirements and optimized internal processes.

FCT AG offers extensive consulting as well as a standard software for the challenges of tomorrow.

Think end-to-end. Increasing and demanding requirements by customers as well as a growing global competition are putting permanent pressure on the operational procedures and processes. Today, operative excellence is not just “nice to have” anymore but a “must have” for all companies in order to be able to keep pace with future requirements.

An increasing complexity of organization structures, influences of the global presence and facilities in different locations pose major challenges to companies every day. Current structures and pro-cesses within enterprises have to be constantly questioned and continuously adjusted and improved.

Even simple processes as for example the creation of technical documentation or multi-channel product communication are distributed today via complex organizational structures and are influ-enced by global governance, regional functions and local service units or business partners.

In addition to the TIM standard software, FCT AG offers consulting services with knowledge from 30 years of experience to meet future challenges together.
