

# Taking the guesswork out of content comparison

DITACompare is the accurate, flexible and most dependable comparison tool for identifying all changes in your DITA content. It integrates perfectly into your document lifecycle, consistently identifying all the differences between your document versions, no matter how complex.

## Never miss a detail

Sophisticated algorithms examine the structure and content of your documents so that every difference is identified and processed, with no room for human error.

## Optimise your productivity

Accurate, configurable comparisons bring together the differences that really matter so you can focus on your work, without sifting through line by line comparisons.

## Integrate and automate

Every aspect of DITACompare and its output is optimised for integration with content management systems, DITA editors, and automated processes.

When the scale of your work demands a reliable way of doing things

When you have no time to spare for unpicking errors

When you cannot afford to overlook a single change

## How does DITACompare process your content?

### How it works

DITACompare is based on tried and tested algorithms which understand DITA and its underlying XML structure. This allows it to perform accurate comparisons of your documents, identifying every single difference and applying your preferences to show you the changes that matter most.

### Designed for DITA documents

DITACompare brings order to document comparison. It can be configured to compare at the map or topic level and produce output that integrates into your existing DITA workflow. Enhanced table processing ensures that even complex table changes are presented clearly and logically and - most importantly - are expressed as valid table structures.

### Optimised for integration

DITACompare can be fully embedded into your content lifecycle. Its integration into Adobe FrameMaker and oXygen provide easy access for authors and editors, while Java and .NET APIs offer tight integration with content management systems. This gives you the flexibility to use DITACompare wherever comparisons are needed, improving your management of content change.

### Easy to use output

The output from DITACompare is well-formed DITA, making it simple to publish changes to formats such as HTML and PDF. It can also generate tracked-change markup for a range of DITA editors allowing you to make use of familiar interfaces for viewing and reviewing changes.
